U-POL’s RAPTOR Tough and Tintable Protective Coating is a 2K polyurethane coating that provides surfaces with a protective barrier.

**FEATURES**

- **TINTABLE**
  Can be tinted to match required colour.
  Also available in black.

- **DURABLE**
  Provides tough mechanical damage and stain resistant surface.
  Protects against rust and corrosion.

- **U.V. RESISTANT**
  Delivers a high level of fade resistance.

- **WATER RESISTANT**
  Provides a water resistant finish, keeping moisture out and reducing rust.

- **RESISTANT**
  Resistant against fuels, hydraulic oils, animal urine, salt water and more.

- **QUICK & EASY TO USE**
  Easy as Fill-Shake-Shoot.
  Provides excellent adhesion across many substrates.
  Can be applied with Schutz gun, HVLP gun, roller or brush.

**CERTIFICATES**

- **FIRE RESISTANCE**
  RAPTOR has passed flammability testing for motor vehicles according to the test methods FMVSS 302, ISO 3795 & BS AU 169A.

- **SLIP RESISTANCE**
  When used with RAPTOR TRACTION Anti-Slip Additive it produces a finish meeting ASTM E303-93.
Substrates

- Original Paint
- Aluminium*
- Bare Metal*
- Galvanized*
- SMC
- Most Plastics*
- Fiberglass
- GRP
- E-coat*
- Concrete*
- Wood*

* Some substrates require additional surface preparation before applying RAPTOR. See Substrate Preparation section for details.

Substrate Preparation

To achieve best results with RAPTOR, good preparation is essential.

1. Remove all loose material and any rust from the surface to be coated.
2. Clean and degrease the surface.
3. Abrace the surface with P80 -P180 grit sand paper.
4. Re-clean the surface.
   * Aluminium, bare metal, and galvanized:
     - Localized rub-thrus: prime with an etch primer, such as two coats of RAPTOR Acid Etch Primer.
     - Large exposed areas of bare metal: Full 2K primer system required for optimum adhesion and corrosion resistance.
   * Rigid Plastic: after abrading, clean and degrease then use an adhesion promoter, such as RAPTOR Adhesion Promoter or SYSTEM 2003.
   * Wood: RAPTOR can go direct to stable wood.
   * Concrete: for best results, clean the surface and remove dust. Seal first with proprietary concrete sealer before applying RAPTOR.
   * OEM E-Coat: scuff the surface with an coarse abrasive pad then clean and degrease.

5. For hard to reach areas such as internal corners etc. coat first with a suitable adhesion promoter for optimal adhesion.
**Mixing Ratio**
As simple as
FILL - SHAKE - SHOOT®

<td>Up to 15-20% maximum to reduce the texture. About 25% more coverage*. *Addition of thinner/reducer will affect the product VOC.</td>
</tr>
</tbody>
</table>

* For tinting typically 5% colour is required for good opacity. When tinting above 5% product will need to be mixed out of the bottle in a suitable mixing cup. For best colour control add colour by weight.

For best results use the solvent based toners from basecoat mixing systems. RAPTOR can also be tinted with solvent based basecoats and solvent based 2K solid colour isocyanate cured paints. Where 2K paints are used this will also need to be activated before use. Do not use waterbased systems to tint RAPTOR.

**Mixing by weight**

<table>
<thead>
<tr>
<th>Grams</th>
<th>Coating (A)</th>
<th>Hardener (B)</th>
<th>Colour (5%)</th>
</tr>
</thead>
<tbody>
<tr>
<td>1000g</td>
<td>777g</td>
<td>223g</td>
<td>50g</td>
</tr>
<tr>
<td>500g</td>
<td>388g</td>
<td>112g</td>
<td>25g</td>
</tr>
</tbody>
</table>

Simply FILL the RAPTOR coating bottle with 237ml of hardener, replace cap and SHAKE contents vigorously for at least 2 minutes, add colour and SHAKE contents vigorously for at least 2-minutes. SHOOT.

Pot life of RAPTOR when activated is 60-minutes at 20°C (68°F).
Use of an accelerator is not required.
Only mix one bottle of RAPTOR at a time. Clean gun between mixes.
Do not overtighten cap as this may cause the cap to split.

**2K ISOCYANATE HARDENER**

- Specially designed to provide optimum results independent of climatic conditions and size of repair.
- RAPTOR hardener must not be used on its own, it can only be used with RAPTOR coating.

**Shelf Life**
12 months in unopened containers. Lids must be replaced after every use.

**Storage Temperature**
+5°C (41°F) - +25°C (77°F)
APPLICATION

**Standard Schutz Application**

1. Remove cap from RAPTOR bottle with the mixed RAPTOR.
2. Attach the RAPTOR bottle to the U-POL SCHUTZ GUN.
3. Adjust the air pressure to 2.75 - 4.10 bar (40-60 PSI).
4. Apply to the prepared surface with an even sweeping motion to obtain the desired texture.
5. If applying additional coats allow to flash off for 60 minutes between coats.

U-POL recommends that you spray a test panel with RAPTOR first to ensure the desired texture is achieved.

**How to achieve common textures with a U-POL Schutz Gun;**

1. Standard texture through Schutz Gun:
   - Ø 4 Bar (60 PSI)
   - Ø Distance from object 50cm (1.5 foot)
   - Ø 2 coats with an even sweeping motion

2. Coarse texture through Schutz Gun:
   - Ø Mix RAPTOR and allow to stand for 10-minutes
   - Ø 3 Bar (45 PSI)
   - Ø Distance from object 50cm (1.5 foot)
   - Ø 2 coats - 1 even sweeping motion, 2nd dropping the coat over the first

**How to achieve common textures with a HVLP gun;**

3. Fine texture through HVLP gravity fed gun, 1.6-2.0mm
   - Ø Add 15% reducer
   - Ø 2 Bar (29 PSI)
   - Ø Distance from object 20cm (>0.5 foot)
   - Ø 1st coat even wet coat, second coat reduce pressure and material flow to achieve a fine mist

4. Standard texture through HVLP gravity fed gun, 1.6-2.0mm
   - Ø Add 15% reducer
   - Ø 2 Bar (29 PSI)
   - Ø Distance from object 20cm (>0.5 foot)
   - Ø 1st and second coats applied as even wet coats

The above recommendations are based on our experience with RAPTOR and represent only a few examples of the types of textures that can be achieved. It is recommended that a trial application is made to fine tune the finish before applying onto the finished object.
**Rolling RAPTOR**

1. Pour mixed RAPTOR into a suitable paint tray.
2. Cut in all corners and hard to reach areas with a brush.
3. Apply using an open textured roller.
4. Load roller with the product and apply slowly using medium pressure.
5. Rolling on RAPTOR results in a lower build. Additional coats will be necessary. When applying additional coats, observe 60 minute flash off period between coats.

Do not use in extreme cold or hot temperatures. Ideal application temperature is 20°C (68°F) with humidity of less than 60%.

**Coats**

<table>
<thead>
<tr>

<th>Coating Method</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 Coat: 230μ (9.0 Mils)</td>
<td>1 Coat: 230μ (9.0 Mils)</td>
</tr>
<tr>
<td>2 Coats: 475μ (18.7 Mils)</td>
<td>2 Coats: 475μ (18.7 Mils)</td>
</tr>
</tbody>
</table>

As applied using SCHUTZ Gun

All measurements are approximate and are dependent on the application method. See document "Indicative Consumption" for a variety of applications available from www.u-pol.com.

**Flash-off / min @ 20°C (68°F)**

<table>
<thead>
<tr>
<th>Between coats</th>
<th>Time</th>
</tr>
</thead>
<tbody>
<tr>
<td>60 minutes</td>
<td></td>
</tr>
</tbody>
</table>

**Drying Times**

**Touch Dry @ 20°C (68°F)**

- Less than 1 hour

**Through Dry @ 20°C (68°F)**

- 5-7 days

Reducing flash off time, excessive film build and/or reduced temperatures will alter drying time. Do not allow RAPTOR to come in contact with water for at least 72-hrs.

Higher temperatures will result in shorter flash time and colder temperatures will require a longer flash time. Higher film builds will extend the final cure time.

**Baking**

RAPTOR can be baked for 30 minutes @ 60°C (140°F). Baking will speed up the initial cure, but it is still recommended waiting 7 days for regular use.

**I.R. Cure**

I.R. curing is not recommended.

**Over Painting**

RAPTOR can be overpainted with most modern paint systems. When overpainting, prep the surface as follows:

1. Let sprayed RAPTOR dry for 24 hours.
2. Abrade with a fine abrasive pad.
3. Clean and degrease.

**Adding RAPTOR TRACTION Anti-Slip Additive**

See RAPTOR TRACTION Anti-Slip Additive SOP.
RAPTOR TINTABLE

TECHNICAL DATA SHEET & PROCESS GUIDE
TOUGH PROTECTIVE COATING

PROPERTIES

Data
Flash point -18°C (-0.4°F)
Solid content without thinner Approx. 57 %
Specific weight Approx. 1120g/l (9.18lb/gal US)

Chemical Resistance
• Diesel: No effect
• Petrol: Surface softening
• Xylene: Surface softening
• Hydraulic Oil: No effect
• NaOH: No effect
• Bleach: No effect
• Alcohol: No effect
• Horse urine: No effect

Dielectric breakdown 10.3 kV/mm (262 V/Mil) ASTM D 149
Temperature Resistance -18°C to 100°C (-0.4°F to 212°F)

STORAGE & VOC INFORMATION

Shelf Life
2 years from date of manufacture in sealed original containers.

Storage
Should be stored in cool, dry conditions in the original containers.

Equipment Cleaning
Clean spray gun in-between mixes. All equipment should be thoroughly washed with acetone immediately after use.

VOC Information
The EU limit for this product (product category: IIB(e) in ready to use form is 840g/litre.
The VOC content of this product in ready to use form is 479g/litre.
